## Disclosures

**Mark H. Meissner, MD**  
*I Have No Disclosures*

### Embolization for VO-CPP

*De Gregorio MA, JVIR 2020*

- Retrospective review - 510 women with "clinical PeVD symptoms > 6 mo"
- 84.8% treated with 4 vein embolization (Bilateral Ov & II veins)
- 26 (5%) recurrences

Change in VAS Pain  $p = .0016$

### The Role of Conservative Management

*Venous-Origin Chronic Pelvic Pain*

- Insurance prohibitions ("Investigational Therapy")
- Anatomic limitations to complete treatment
  - Difficult anatomy
  - Duplicated ovarian veins
- Residual symptoms after treatment
  - Untreated venous disease
  - Concurrent pelvic pathology
  - "Central sensitization" & chronic pain

### Hormonal Management of Chronic Pelvic Pain

*Jarrell JJ, Journal of Gynecology & Obstetrics 2018*

- Medical management with ovarian suppression
  - First line – low dose oral contraceptives
  - Second line
    - Progestin (medroxyprogesterone acetate)
    - Danazol (synthetic androgen)
- GnRH analogs also efficacious in chronic pelvic pain syndrome
  - Irritable bowel syndrome (IBS) (Mathias UR, Dig Dis Sci 1998)
  - Interstitial cystitis (IC) (Jones CA, Urology 1997)
  - Venous-origin pelvic pain (Soysal ME, Human Reproduction 2001)

### Hormonal Therapy & Venous-Origin Pelvic Pain

*Soysal ME, Human Reproduction 2001*

- 47 women with chronic pelvic pain, venographically documented varices and no other pelvic pathology randomized to
  - Goserelin q month X 6 months
  - Medroxyprogesterone acetate (MPA) 30 mg/day X 6 months
- Follow-up at 6 and 12 months

Parameter	MPA (n = 24)				Goserelin (n = 23)			
	Baseline	First <sup>a</sup>	Final <sup>b</sup>	P <sup>c</sup>	Baseline	First <sup>a</sup>	Final <sup>b</sup>	P <sup>c</sup>
Venography score	8.6 ± 0.5	-	4.5 ± 1.2	0.001	8.5 ± 0.6	-	3.2 ± 0.5	0.001
Pelvic symptom score	10.9 ± 1.1	5.1 ± 1.3	6.2 ± 1.1	0.001	10.2 ± 1.4	2.3 ± 1.1	2.5 ± 1.3	0.001
ISSRS score	35.6 ± 4.4	71.7 ± 7.3	66.4 ± 8.3	0.001	7.6 ± 3.8	81.1 ± 3.1	80.2 ± 2.7	0.001

### Venous Pain & Inflammation

*Bergan JJ, New Engl J Med 2006*

*From Bush R, Phlebology 2017*

### MPFF & Chronic Pelvic Pain

*Simsek M, Clin Exp Obstet & Gynecol 2007*

- 20 patients with laparoscopically confirmed venous-origin CPP (S<sub>2</sub>V<sub>2</sub>)
- Randomized to
  - 500 mg micronized purified flavonoid fraction (MPFF) bid
  - Placebo (multivitamin)
- Cross-over at 6 months

Group A: Started with Diosmin and then did crossover to vitamin for placebo effect.  
Group B: second arm of the study group received vitamin for six months and switched over to Diosmin in the second half of the study.

### Myofascial Pelvic Pain

**Effectiveness of Myofascial Manual Therapies in Chronic Pelvic Pain Syndrome: A Systematic Review and Meta-Analysis**

*Fulvio Dal Farra<sup>1,2</sup>, Alessandro Aquino<sup>1,4,5</sup>, Andrea Gianmaria Tarantino<sup>1,4</sup>, Daniele Origo<sup>1</sup>*

*International Urogynecology Journal (2022) 33:2963–2976*

Study or Subgroup	Mean	SD	Total	Mean	SD	Total	Weight	MD, Mean Difference	IV, Random, 95% CI
Avila-Waters 2019	4.1	1.76	10	4.3	2.75	17	28.4%	-0.20	(-0.74, 0.34)
Prasad 2012 (1)	4.2	2.0	11	4.0	2	12	18.0%	-0.10	(-0.51, 0.31)
Prasad 2012 (2)	4	1.7	15	4.2	2.0	18	27.8%	-0.22	(-0.66, 0.22)
Prasad 2012 (3)	3.8	2.1	10	4.0	2.0	12	18.0%	-0.20	(-0.66, 0.26)
Reuter 2006	2.9	2.8	22	3.1	1.8	32	20.8%	-0.21	(-0.66, 0.24)
<b>Total (95% CI)</b>	<b>38</b>	<b>100</b>	<b>100%</b>	<b>-0.54</b>	<b>(-1.16, 0.08)</b>				

Heterogeneity: Tau<sup>2</sup> = 0.37; I<sup>2</sup> = 93.0%; P = 4 (P = 0.002); P = 708.  
Test for overall effect: Z = 4.1; P < 0.0001.

### Conclusions

**VEITH SYMPOSIUM**  
Connecting The Vascular Community

- Interventions for venous-origin CPP – Effective *but* imperfect
- Indications for medical management
  - Insurance limitations
  - Inadequate response to intervention
- Medical management of venous-origin chronic pelvic pain
  - Hormonal therapy
  - Phlebotonic agents (e.g. MPFF)
  - Pelvic floor physical therapy
- But often a chronic pain syndrome best treated with a multidisciplinary approach
